AI Automation Engineer / Production Cloud Infrastructure / Client Operations & CRM (MBA)

PROFESSIONAL SUMMARY

AI Automation Engineer who ships production systems — not prototypes. Designed, built, and deployed a portfolio of autonomous AI workflows running 24/7 on self-hosted cloud infrastructure (Oracle Cloud ARM, \$0/month) with CI/CD, HTTPS, monitoring, auto-restart, and self-healing token refresh. Background as a CRM & Client Operations professional (MBA, 3+ years owning end-to-end workflows across 300+ residential units) gives me a structural eye for processes, SOPs, and where automation actually creates leverage versus theatre. I build systems that survive crashes, network blips, and OAuth-token expirations at 3 AM — not just sunny-day demos. Live portfolio: dev-portfolio-dun-theta.vercel.app

CORE COMPETENCIES

Engineering: AI Agent Design · Workflow Engineering (n8n, Python) · LLM Integration (Claude, Gemini, Groq, Ollama/Qwen) · Self-Hosted Cloud Infrastructure · Linux Systems (Ubuntu, systemd) · CI/CD (GitHub Actions) · Nginx + Let's Encrypt + HTTPS · Production Monitoring & Self-Healing Systems · OAuth2 & API Integration · SQLite, FastAPI, Next.js

Operations: Stakeholder & Client Lifecycle Management · CRM Operations & Team Leadership · End-to-End Process Ownership · SOP Design & Optimization · Cross-Functional Coordination · Compliance & Documentation · Data Integrity & Reporting · Escalation Management

PROFESSIONAL EXPERIENCE

Paras Buildtech

Assistant Manager — CRM

Apr 2026 – Present

Gurgaon, Haryana

- Leading CRM team operations across the post-sale client lifecycle — managing workload allocation, escalation resolution, and service-level adherence.
- Driving cross-functional coordination between sales, finance, legal, and technical departments to eliminate handoff bottlenecks and reduce query resolution time.
- Establishing performance tracking frameworks for CRM query volume, resolution speed, and CSAT — building reporting infrastructure for leadership-level visibility.
- Auditing and standardising CRM data entry and documentation practices to ensure reporting integrity across the team.

County Group

Client Operations & Coordination Executive

Jul 2023 – Apr 2026

Noida, Uttar Pradesh

- Owned the complete post-sale operational lifecycle for **300+ residential units across 3 active projects spanning 7 towers** — documentation, customer communications, legal compliance checks, and inter-departmental coordination from booking to possession.
- Served as single operational point of contact for clients from booking to registry; coordinated daily with sales, finance, legal, and technical teams.
- Led the end-to-end possession handover process — audited files for documentation, compliance, and clearances; achieved **zero handover rejections**.
- Designed SOP-driven workflow improvements across client query management — **35% reduction in resolution time**.

- Drove a **20% improvement in client satisfaction scores** through structured service interventions and proactive communication frameworks.
- Built and maintained CRM dashboards tracking service-performance KPIs; presented operational insights to senior leadership, influencing strategic revisions to client service workflows.

Freelance

Special Event Manager & Emcee

Oct 2022 – Apr 2023

Delhi, India

- Led full project lifecycle of an international panel event (90+ attendees) — budgeting, vendor negotiations, logistics, multi-stakeholder coordination — delivering **97% attendee satisfaction**.
- Directed a 7-member cross-functional team under significant time and resource constraints; served as Emcee for the international conference.

Conscient Infrastructure Pvt. Ltd.

Human Resources Intern

Oct 2019 – Apr 2020

Gurugram, Haryana

- Supported onboarding operations and ERP-based data management; streamlined internal communication workflows — **20% reduction in internal escalations**.

PRODUCTION AI SYSTEMS — SELF-HOSTED ON CLOUD, 24/7

The three flagship systems below run continuously on Oracle Cloud ARM (Ubuntu 22.04, 4 vCPU, 24 GB RAM) with systemd auto-restart, nginx + Let's Encrypt HTTPS, GitHub Actions auto-deploy on push, and a custom monitoring dashboard at rajputdev77.duckdns.org. Total infrastructure cost: \$0/month, indefinitely.

Multi-Channel Content Automation Engine — “Soul in Motion” — Word file with timestamped journal entries → AI expansion into 5 content formats (mini-blog, video script, Instagram pack, LinkedIn post, master blog) → animated 1080×1920 reel rendered frame-by-frame in MoviePy → auto-publish across 9 platforms (LinkedIn, Dev.to, Hashnode, WordPress, Blogger, Instagram, YouTube Short + Video, Medium). End-to-end run in 11 minutes from save to all 9 platforms live. Migrated from Windows laptop to Oracle Cloud ARM May 2026 — writing a cross-platform process-management shim (psutil-based) and using Synching for peer-to-peer laptop→cloud journal sync.

Stack: Python 3, Groq Llama 3.3 70B, MoviePy + FFmpeg, Cloudinary, Instagram Graph API, YouTube Data API v3, OAuth2, n8n (self-hosted), Synching, systemd *Outcome:* 11-minute end-to-end content pipeline; 9 platforms; zero-manual; \$0/month infra; 24/7 uptime.

Hyperliquid Jarvis — Two-Market Paper-Trading Agent — Two autonomous LLM-driven paper-trading bots (Hyperliquid crypto perps + Alpaca US equities) sharing a single PaperBroker core. Hourly decisions validated against hard risk limits before execution; SQLite paper broker; *class-boundary* isolation (the live Exchange module is never imported in paper code) makes real-money orders structurally impossible. Migrated from Gemini cloud (20-req/day free-tier limit) to self-hosted Ollama with Qwen 2.5 Coder 14B on the Oracle ARM VM — unlimited inference at \$0/month. Provisioning the free ARM VM took 145 OCI CLI retry attempts; built a documented capacity-retry script that works overnight.

Stack: Python 3.13, hyperliquid-python-sdk, alpaca-py, Ollama + Qwen 2.5 Coder 14B, FastAPI, SQLite, Next.js 14 dashboard, GitHub Actions CI/CD *Outcome:* 2 markets, 1 codebase, public live dashboard, \$0/month, 24/7. Live: dashboard-sigma-nine-63.vercel.app.

AI News Daily — Autonomous YouTube + LinkedIn Pipeline — 6-stage state-checkpointed pipeline: aggregates trending news from 3 sources (Google Trends + Reddit + NewsAPI) with cross-source scoring → Groq writes a 4–5 min script → Edge TTS narrates → Pexels pulls visuals → FFmpeg assembles 1080p video → YouTube + LinkedIn auto-post. State persistence means a failure at stage 4 resumes from

stage 4, not from scratch. Migrated to Oracle Cloud May 2026 to fix a 5-day silent failure where an OAuth token expired unnoticed — now pushes run status to a public live-data repo every cycle, making failures visible immediately.

Stack: Python 3.14, Groq Llama 3.3 70B, Edge TTS, Pexels API, NewsAPI, FFmpeg 8.1, YouTube Data API v3 (resumable upload), systemd timers, GitHub Actions *Outcome:* [Daily videos, zero-touch, observable failure modes, 100% uptime since cloud migration.](#)

AI Lead Qualification Pipeline — Form-to-AI-qualification-to-sales-alert in under 30 seconds. Scores inbound leads HOT/WARM/COLD with rationale; writes back to Google Sheets; triggers email + WhatsApp alerts on hot leads. Repeatable freelance service deployed for real-estate and education clients.

Stack: n8n, Groq Llama 3.3 70B, Google Sheets, Twilio WhatsApp, Gmail API *Outcome:* [Sub-30-second lead scoring; deployed as a repeatable freelance service.](#)

Job Application Agent — Fully automated job pipeline. 5 scrapers (Playwright + Chromium) run every 4–6 hours; local Qwen 2.5 7B scores each job 0–100 against my profile; matches ≥ 70 get a tailored CV + cover letter; three executor agents auto-submit via Playwright; every step logged to Google Sheets for audit.

Stack: n8n (11 workflows), Ollama + Qwen 2.5 7B, Playwright + Chromium, Python, Google Sheets API *Outcome:* [Replaced 4+ hours/day of manual job searching with a fully autonomous local pipeline.](#)

Second Brain — Personal Knowledge System — 3-layer compounding knowledge system: a CLAUDE.md auto-memory file the agent edits as it learns + an Obsidian vault with the smart-connections MCP + an ingestion pipeline that captures from Telegram, YouTube transcripts, Whisper voice notes, and bookmarks — routed into the vault for retrieval-augmented context on every conversation.

Stack: Obsidian (MCP), n8n (8 workflows), Telegram Bot API, Python (Whisper, yt-dlp), Flask, Claude API

KEY ACHIEVEMENTS

- **3 production AI systems running 24/7 on free Oracle Cloud ARM** with HTTPS, CI/CD, auto-restart, self-healing token refresh — \$0/month total infrastructure.
- **35% faster resolution time** — Redesigned client query SOPs at County Group, improving throughput across 300+ active units.
- **20% CSAT improvement** — Structured client service interventions across 3 residential projects.
- **97% event satisfaction** — International panel event with 90+ attendees and a 7-person team.
- **Zero possession handover rejections** — File audit and compliance verification process.
- **10+ AI systems shipped in production** — Content automation, lead qualification, autonomous trading, knowledge management, daily video pipelines.

TECHNICAL SKILLS

AI & LLM	Claude API, Groq, Gemini, Ollama + Qwen, OpenAI; prompt engineering, structured-output (JSON-mode), agent design, RAG, vector memory (Mem0, Qdrant)
Workflow Agents	/ n8n (50+ workflows shipped), Playwright + Chromium, watchdog, scheduling (cron + systemd timers)
Development	Python 3, JavaScript, TypeScript, Next.js, React, FastAPI, Node.js, Bash
Cloud & DevOps	Oracle Cloud (Always Free ARM), Vercel, GitHub Actions (CI/CD), Cloudflare, Linux/Ubuntu, systemd, nginx, Let's Encrypt/certbot, UFW + fail2ban, SSH key management, OCI CLI
Integrations	Google Sheets, YouTube Data API v3, Gmail, Instagram Graph, Twilio WhatsApp, LinkedIn REST + n8n nodes, OAuth2, GraphQL, SQLite, MoviePy + FFmpeg media pipelines
Tools	Obsidian + smart-connections MCP, Git/GitHub (incl. <code>filter-branch</code> for history rewriting), Telegram Bots, Notion, MCP server design, Syncthing
Business	CRM team management, product thinking, workflow design, SOP design, compliance, KPI dashboards, vendor coordination

EDUCATION

Ambedkar University, Delhi <i>Master of Business Administration (MBA) — Innovation, Entrepreneurship & Venture Development</i>	<i>Dec 2021 – Nov 2023</i>
Ramanujan College, University of Delhi <i>B.A. (Hons) Philosophy</i>	<i>Jul 2016 – Jun 2019</i>

CERTIFICATIONS, LANGUAGES & ADDITIONAL

Certifications: Google AI Essentials — Google (7-course program) · AI Capabilities and Limitations — Anthropic · AI Fluency: Framework & Foundations — Anthropic · Developing Interpersonal Skills — IBM

Languages: English (Full Professional) · Hindi (Native) · Spanish (Elementary)

Additional: State-level Cricket player; multi-award winner in performing arts (First Prize, Best Production, Most Original Adaptation) — competitive drive, teamwork, stage presence.
